## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

## DETAILED ACTION

### *Allowable Subject Matter*

1. **Claims 5, 7, 8, 10, 11, 12, 27, and 29-36 are allowed** which have been re-numbered to as 1, 2, 3, 4, 5, 6, 13, 14, 15, and 7-12, respectively.

The following is an examiner's statement of reasons for allowance:

Regarding independent **claim 5**, the prior art of record fails to teach or suggest a multi-channel PWM (Pulse Width Modulator) apparatus comprising: a plurality of pulse width modulators (PWM); a gain control unit, wherein the gain control unit comprises:

AGC (Automatic Gain Controller) configured to receive output signals of the comparators for variably controlling the gain controllers according to individual output signals of the comparators; and

a plurality of adders that perform addition or subtraction operations based on control signals generated from the AGC and volume control signals for said channels, and independently varying gains for said channels based on results of the addition or subtraction operations,

wherein each of the adders receives two input signals being a corresponding volume control signal and a corresponding control signal from the said AGC for a respective one of the channels, and outputs an independent gain control

signal to a corresponding one of the gain controllers, in combination with other limitations, as specified in the independent claim 5.

Regarding independent **claim 27**, the prior art of record fails to teach or suggest an audio/visual receiver comprising:

a pulse width modulator device configured to modulate the audio signals into PWM-based multi-channel audio signals that comprises,

a plurality of pulse width modulators configured to modulate the audio signals into the PWM-based multi-channel audio signals; and

a plurality of signal controllers coupled to the plurality of modulators to independently control at least one of input signals and output signals of the plurality of pulse width modulators, wherein the plurality of signal controllers comprise a plurality of controllers that independently enable the plurality of pulse width modulators according to individual channels, and wherein:

the pulse width modulators comprise N pulse width modulators for PWM-modulating PCM-based N-channel audio signals read from the recording medium while being classified according to individual channels, wherein the controllers include N AND gates for selectively enabling all the N pulse width modulators or a subset of pulse width modulators from among the N pulse width modulators, where N is an integer such that  $N \neq 0$ , and

the AND gates each receive an overload condition signal for compulsorily turning off the pulse width modulators when a value of system load is

higher than a reference value, and PWM on/off control signals for every channel for turning on/off the pulse width modulators according to a user's key signal or an optical disc type, and performing an AND operation between the overload condition signal and the PWM on/off control signals, in combination with other limitations, as specified in the independent claim 27.

**Claims 7, 8, 10, 11, 12, and 31-36 are allowed** by virtue of their dependency on claim 5.

**Claims 29-30 are allowed** by virtue of their dependency on claim 27.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
